

ABSTRACT

An anti-static paper is formed by treating a fibrous base paper with a saturant. The saturant comprising a solution of an anti-static agent, and a liquid carrier and the anti-static agent is deposited in the interstices of said fibrous base paper. A viscosity increasing agent is employed to produce a viscosity in the range that suppresses saturation of said base paper while not substantially suppressing delivering of said anti-static agent to the interstices of the fibrous base paper.
